TeamIndus: Moon Mission

TeamIndus, the only Indian team in the Google Lunar XPRIZE competition, is building a privately funded Spacecraft capable of soft landing on the Moon by the end of 2017. TeamIndus was one of five teams selected to compete in the Milestone prizes and successfully won \$1M as a Milestone prize for our landing technology. The \$30M Google Lunar XPRIZE is a global competition to challenge and inspire engineers and entrepreneurs to develop low-cost methods of robotic space exploration. To win, a privately funded team must successfully place a robot on the Moon that explores at least 500 meters and transmits high-definition video and images back to Earth.
